

# TRIOMED

## Antimicrobial Self-Adhesive Absorbent Dressing

A critical technological advance in the field of medical self-adhesive dressings: TRIOMED™ incorporates a powerful antimicrobial to control microbiological contamination (fungi, bacteria, viruses)

**SIZES:** (10 pcs/box)  
5cm x 7cm  
8cm x 10cm

### Laboratory tested advantages of the TRIOMED™ Antimicrobial Dressing

- Proven to kill on the external surface of the dressing, at least 99.99% of Staphylococcus aureus, MRSA, Enterococcus faecalis, VRE, Klebsiella Pneumoniae, Pseudomonas aeruginosa, Escherichia coli, Acinetobacter baumannii, and Influenza A H1N1
- Non-cytotoxic and non-irritating
- Releases no chemicals on the patient
- Hypoallergenic

### Indications for use:

- The TRIOMED™ Self-Adhesive Absorbent Dressing is a single use, disposable device intended as a primary dressing for a wide range of wounds or as a secondary fixation dressing to cover or secure objects.
- Designed for ease-of-use
- Latex free
- Made with a conformable and flexible non-woven
- Provides a strong and reliable fixation
- Remove paper backing and place over intended area
- 5 year shelf life (proven efficacy)
- Comprised of an absorbent wound pad covered with an anti-adherent film
- Individually packaged

# Neutralizes 99.99% of harmful pathogens on contact

All Scientific and clinical studies indicate that the external surfaces of medical & surgical tapes and dressings commonly used in healthcare settings are contaminated with pathogenic bacteria and may serve as a significant source of infection.

The patented TRIOMED™ technology incorporates a broad-spectrum and powerful Tri-iodide antimicrobial engineered to eliminate this infection risk.

The TRIOMED™ Antimicrobial Self-Adhesive Absorbent Dressing will effectively kill on its external surface harmful infections and is the only existing solution to stop this widespread contamination.

**Study comparing the microbiological contamination of commercially available medical dressings versus TRIOMED™ dressings after only 1 hour on a patient.**

\* Microbiological contamination of Commercially available Dressings

VS

\* NO microbiological contamination on TRIOMED™ Antimicrobial Self-Adhesive Dressing

**Conclusion:** As evidenced by pictures above, the commercially available dressing's external surface is microbiologically contaminated and being digested by the infection source, while the TRIOMED™ Dressing maintains its microbiological integrity
