A critical technological advance in the field of medical self-adhesive dressings: TRIOMED™ incorporates a powerful antimicrobial to control microbiological contamination (fungi, bacteria, viruses)

Indications for use:
- The TRIOMED™ Self-Adhesive Absorbent Dressing is a single use, disposable device intended as a primary dressing for a wide range of wounds or as a secondary fixation dressing to cover or secure objects.
- Designed for ease-of-use
- Latex free
- Made with a conformable and flexible non-woven
- Provides a strong and reliable fixation
- Remove paper backing and place over intended area
- 5 year shelf life (proven efficacy)
- Comprised of an absorbent wound pad covered with an anti-adherent film
- Individually packaged

Laboratory tested advantages of the TRIOMED™ Antimicrobial Dressing
- Proven to kill on the external surface of the dressing, at least 99.99% of Staphylococcus aureus MRSA, Enterococcus faecalis VRE, Klebsiella Pneumoniae, Pseudomonas aeruginosa, Escherichia coli, Acinetobacter baumannii, and Influenza A H1N1
- Non-cytotoxic and non-irritating
- Releases no chemicals on the patient
- Hypoallergenic

SIZES: (10 pcs/box)
5cm x 7cm
8cm x 10cm
Neutralizes 99.99% of harmful pathogens on contact

All scientific and clinical studies indicate that the external surfaces of medical & surgical tapes and dressings commonly used in healthcare settings are contaminated with pathogenic bacteria and may serve as a significant source of infection.

The patented TRIOMED™ technology incorporates a broad-spectrum and powerful Tri-iodide antimicrobial engineered to eliminate this infection risk.

The TRIOMED™ Antimicrobial Self-Adhesive Absorbent Dressing will effectively kill on its external surface harmful infections and is the only existing solution to stop this widespread contamination.

Study comparing the microbiological contamination of commercially available medical dressings versus TRIOMED™ dressings after only 1 hour on a patient.

* Microbiological contamination of Commerically available Dressings

VS

* NO microbiological contamination on TRIOMED™ Antimicrobial Self-Adhesive Dressing

Conclusion: As evidenced by pictures above, the commercially available dressing’s external surface is microbiologically contaminated and being digested by the infection source, while the TRIOMED™ Dressing maintains its microbiological integrity.
